Aluminium gear pumps and motors

Technical Catalogue
and Dealer management

E0.130.0114.14.00-IMO

Company
with quality system
certified by DNV
UNI EN ISO 9001/2008

L'Azienda Salami Spa rappresenta un'eccellenza italiana nel settore della potenza idraulica applicata a macchine mobili e veicoli industriali.

E' stata fondata nel 1956 con precise linee guida che hanno condotto il marchio Salami a identificarsi come simbolo di **Garanzia e Affidabilità** nel proprio settore, in Italia e nel Mondo. Salami Spa è rimasta fedele nel tempo ai tre punti di forza dettati dal suo fondatore che hanno reso riconoscibile e grande il marchio Salami nel mondo: **Qualità, Innovazione, Servizio**. Attraverso le proprie sedi di Spagna, Francia, Stati Uniti d'America, Canada e ai suoi partner commerciali, distribuisce i propri prodotti mettendo al servizio del mondo intero l'eccellenza ingegneristica italiana.

In questo volume vi presentiamo la **nuova pompa in alluminio 3PE**, innovativa versione del Gruppo 3.

La pompa 3PE viene offerta nelle cilindrata da 21 a 75 cc/rev (da 1.26 a 4.48 cu.in/rev). E' inoltre in grado di raggiungere pressioni di picco fino a 300 bar (4350 psi).

I **due principali** vantaggi che offre questa pompa sono:

1. le **dimensioni compatte**, che ne consentono l'installazione anche sui moderni motori Tier 4
2. la **modularità** che consente di personalizzare il prodotto con la massima facilità

La prima parte del catalogo è dedicata alla descrizione tecnica delle pompe.

Nella seconda parte, denominata *Dealer management*, sono elencati i codici di ordinazione sia per le pompe singole che per i kit di trasformazione.

Per ogni versione pompa 3PE Salami offre i corrispondenti **motori unidirezionali e reversibili**.

Benvenuti nel team Salami.

Il Direttore Commerciale
Michele Piazza

The **Salami Company** is one of the best Italian engineering excellences in the field of fluid power applied to mobile applications.

It was founded in 1956 with specific guidelines that have led the brand to identify Salami as a symbol of **Warranty and Reliability** in its sector, in Italy and in the World.

Salami Hydraulics proudly manufactures in Italy and it has remained loyal in time to its three strengths dictated by its founder.

Quality, Innovation and Service have made the brand Salami recognizable and great in the world.

Through its offices in North America, Spain, France, together with its business partners, the company distributes its own products by putting the excellence of Italian engineering at the service of the whole world.

In this volume we present you the innovative version of the Salami Pump Group 3: the **new aluminium gear pump 3PE**.

We can offer you the 3PE pump in displacements from 21 to 75 cc / rev (1.26 at 4.48 cu.in /rev). It is also able to reach pressures up to 300 bar (4350 psi).

The **two main benefits** of this pump are:

- 1 . **compact dimensions**, which allow the installation even on modern engines Tier 4
- 2 . **modularity** that means an easiest customization of the products

The **first section** of the catalog is dedicated to the technical description of the pump.

The **second part**, called Dealer management, includes the order part numbers for both single pump and conversion kit.

For every version of 3PE pump, Salami provides the **corresponding one-way and reversible motors**.

Welcome into Salami Team.

Commercial Director
Michele Piazza

The data on this catalogue refer to the standard product. The policy of Salami consist of a continuous improvement of its products. It reserves the right to change the specifications of the different products whenever necessary and without giving any information. If any doubts, please get in touch with our sales department.

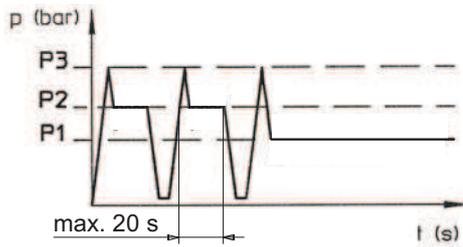

3PE - 3ME

Aluminium gear pumps and motors

Section A - Technical catalogue

E0.130.0913.02.00-IM00

DEFINITION OF PRESSURES

P3 = Peak pressure
 P2 = Intermittent operating pressure
 P1 = Continuous operating pressure

GENERAL

- Superior performance and reliability in heavy-duty hydraulic application.
- Construction with large area, low-friction bushings provide strength, high efficiency, and long life in severe operating environments.
- The design includes an advanced bushing and seal configuration, which optimizes performance even in high temperature and low viscosity conditions.
- Double pump with common suction reduces mounting costs, allow for a small package size.

WORKING CONDITIONS

- Pump inlet pressure (absolute pressure)	0,7 to 2,5 bar 10 to 36 psi
- Minimum operating fluid viscosity ¹	12 mm ² / sec
- Max starting viscosity	800 mm ² / sec
- Suggested fluid viscosity range	17 - 65 mm ² / sec
- Fluid operating temperature range	- 15 to 85 °C
- Fluid operating temperature range with FPM seals(Viton) ...	- 20 to 110°C
- Hydraulic fluid	mineral oil

Important:
 in case of assembling of pumps without shaft seals, you have to keep the value of min. suction pressure (0.7 bar (abs)) in the vane between pump and coupling too.
 Lower pressure can lead to suction of oil through the front flange (seat of the shaft without seal); this can damage seriously the pump.

1 - With reduction 80% of working pressure and at minimum speed.

Suggestion:

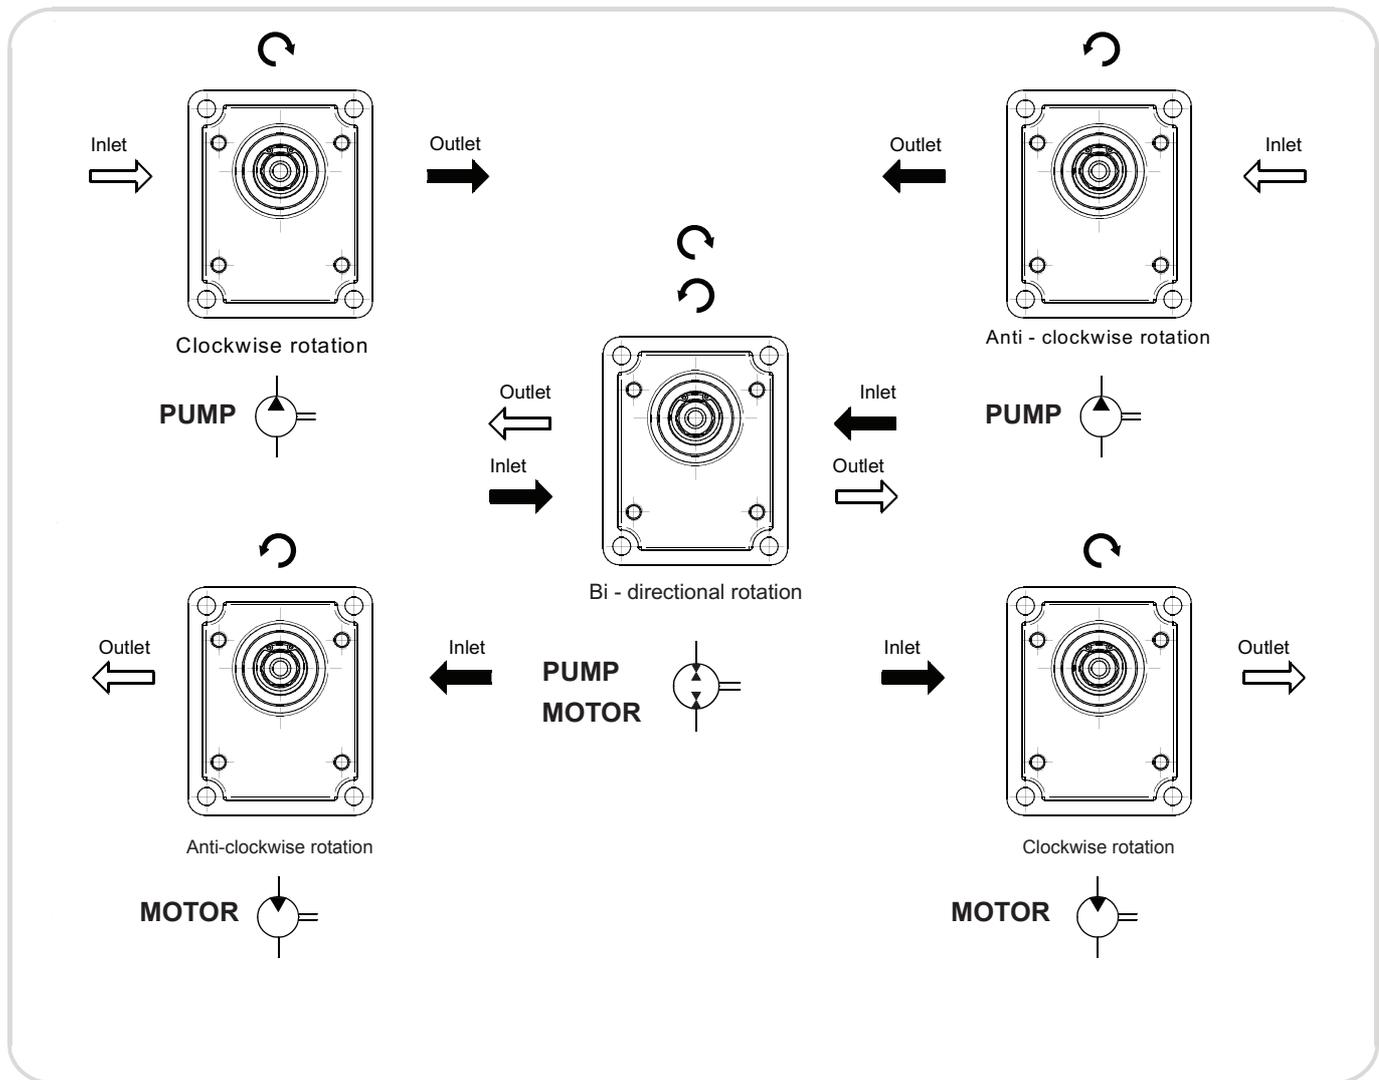

to have the best behaviour and duty life of the pump/motor, use a cooling system in order to keep the fluid temperature at 60°C and viscosity at 20 cSt. In addition to the recommended filtration index of page 3.

DRIVE SHAFTS

Radial and axial loads on the shafts must be avoided since they reduce the life of the unit.

DIRECTION VIEWED AT THE DRIVE SHAFT

HYDRAULIC PIPE LINE

To ensure favorable suction conditions it is important to keep pressure drop in suction pipe line to a minimum value (see WORKING CONDITIONS).

To calculate hydraulic pipe line size, the designer can use; as an approximate guide, the following fluid speed figures:

From 1 to 2 m/sec on suction pipe line
From 6 to 10 m/sec on pressure pipe line

From 3.28 to 6.36 ft/sec on suction pipe line
From 19.7 to 32.8 ft/sec on pressure pipe line

The lowest fluid speed values in pipe lines is recommended when the operating temperature range is high and/or for continuous duty.

The highest value is recommended when the temperature difference is low and/or for intermittent duty.

FILTRATION INDEX RECOMMENDED

Working pressure	> 200 bar - 2900 psi	< 200 bar - 2900 psi
Contamination class NAS 1638	9	10
Contamination class ISO 4406	19/18/15	20/19/16

FIRE RESISTENT FLUID

Type	Description	Max pressure	Max speed (rpm)	Temperature
HFB	oil emulsion with 40% water	130 bar/1880 psi	2500	3°C +65°C
HFC	Water glycol	180 bar/2600 psi	1500	-20°C +65°C
HFD	Phosphate esters		1750	-10°C +80°C

COMMON FORMULAS FOR PUMPS

$$C = \text{Input torque} = \frac{q \cdot \Delta p}{62.8 \cdot \eta_m} \text{ (Nm)}$$

$$P = \text{Input power} = \frac{q \cdot n \cdot \Delta p \cdot 10^{-3}}{600 \eta_m} \text{ (kW)}$$

$$Q = \text{Outlet flow} = \frac{q \cdot n \cdot \eta_v}{1000} \text{ (l/min)}$$

LEGENDA

Δp = Working pressure (bar)

q = Displacement (cm³/rev)

n = Speed (min⁻¹)

η_m = Mechanical eff. (0.92)

η_v = Volumetric eff. (0.95)

COMMON FORMULAS FOR MOTORS

$$\text{Input flow: } Q = \frac{V \cdot n}{1000 \cdot \eta_v} \text{ l/min}$$

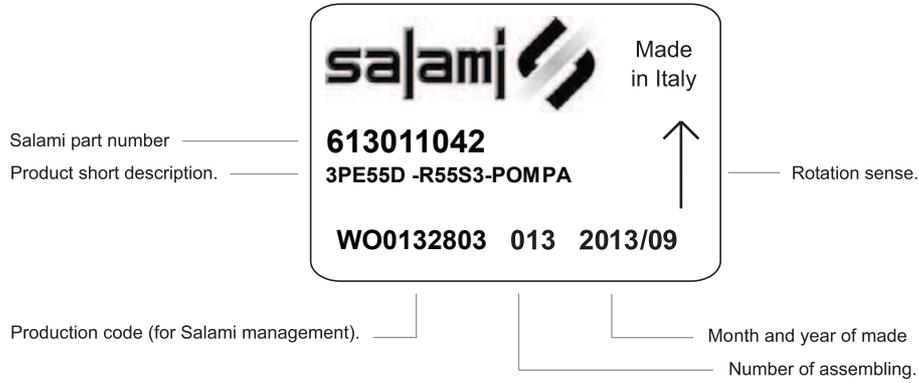

$$\text{Output torque: } M = \frac{V \cdot \Delta p \cdot \eta_m}{20 \cdot \pi} \text{ Nm}$$

$$\text{Output power: } P = \frac{M \cdot n}{9550} = \frac{Q \cdot \Delta p \cdot \eta_t}{600} \text{ kW}$$

V = Displacement cm³/rev [in³/rev]
 P_{out} = Outlet pressure bar [psi]
 P_{in} = Inlet pressure bar [psi]
 ΔP = $P_{out} - P_{in}$ (system pressure) bar [psi]
 n = Speed min⁻¹ (rpm)
 η_v = Volumetric efficiency
 η_m = Mechanical efficiency
 η_t = Overall efficiency ($\eta_v \cdot \eta_m$)

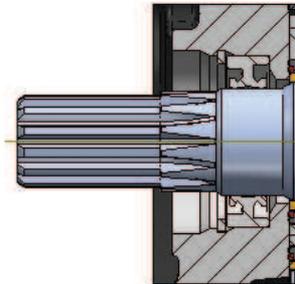

DESCRIPTION OF THE NEW PRODUCT IDENTIFICATION LABEL

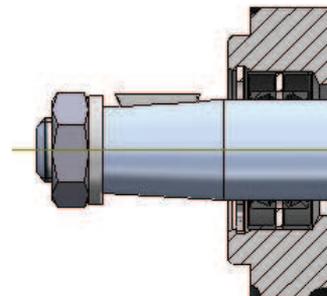

SHAFT SEAL DESIGN, PRESSURE AND MATERIAL AVAILABLE

Max pressure	3 bar (44 psi)
Material BUNA (NBR)	-15° C - 85° C
Material VITON (FPM)	-20° C - 110° C

With flange code S3, double lipped shaft seal

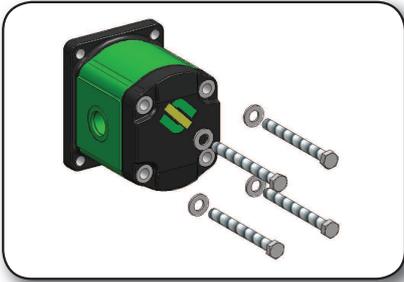

With flanges code P2, P3 and B6 two single lipped shaft seals

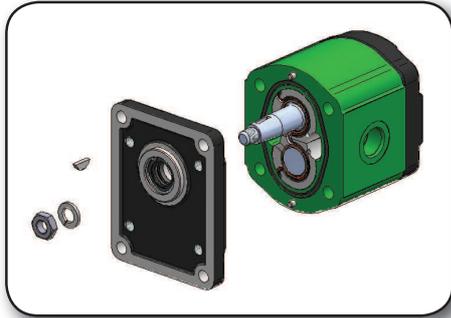

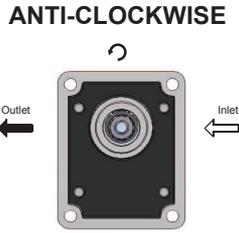

**GEAR PUMPS "E" SERIES
GEAR MOTORS "E" SERIES**

3PE - 3ME

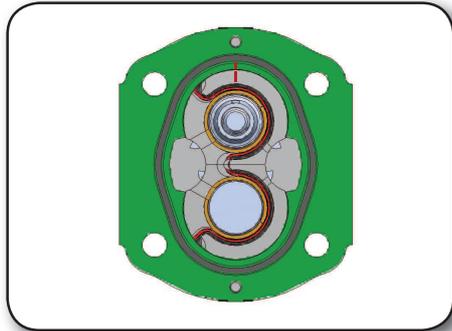

ROTATION CHANGE INSTRUCTION

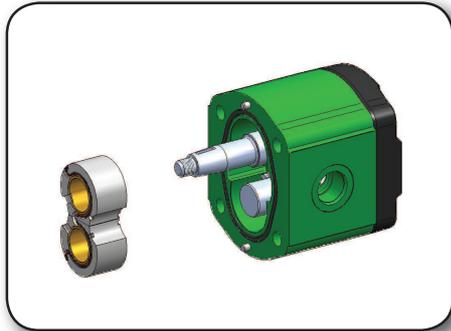

Step 1:
unscrew and take off the
4 assembling bolts.

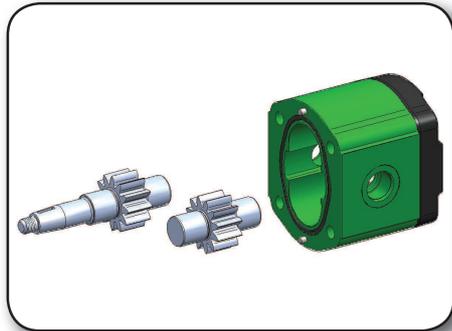

Step 2:
take off the front
flange, complete of
shaft seals.

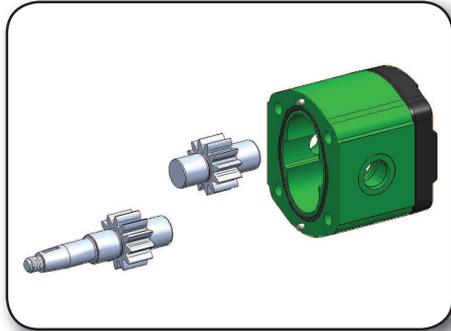

Step 3:
take note of the
assembling position of
the bronze thrust plate.
If necessary, you can
put a mark which help
you remembering the
position of the plate re-
lated to the body. This is
very important, because
at the end you must re-
assemble it in this way.

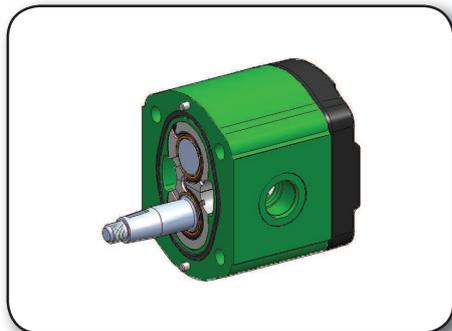

Step 4:
take off the thrust
plate.

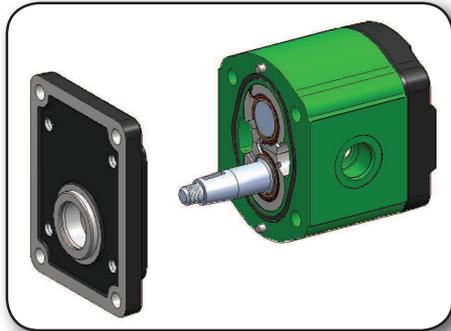

Step 5:
take off both the
shafts, drive and
driven.

Step 6:
reverse their position
and re-assemble
them.

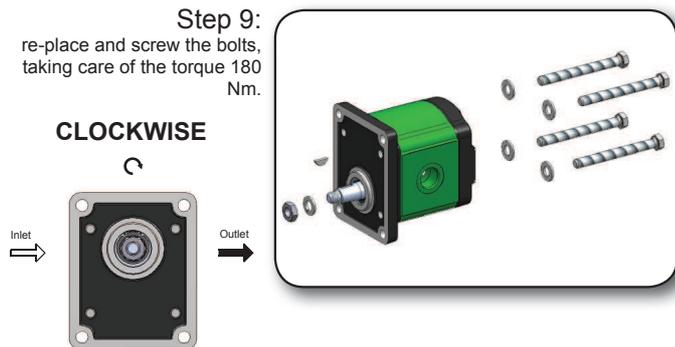

Step 7:
re-assemble the
thrust plate in the
same position it was
at the beginning.
Reference step 3.

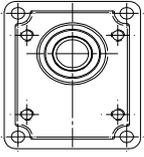

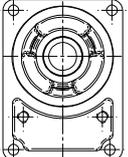

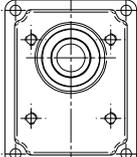

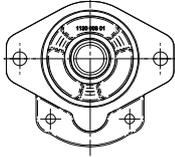

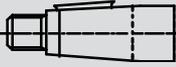

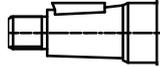

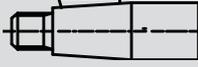

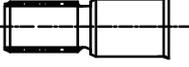

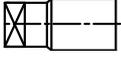

Step 8:
reverse and re-
assemble the front
flange.

THIS INSTRUCTION IS APPROPRIATE FOR BOTH,
UNIDIRECTIONAL PUMPS AND MOTORS.

SUGGESTED COMBINATIONS OF FLANGES AND SHAFTS AVAILABLE

	psi	4350			3987,5	4060	3625	3480	3190
Min. rotational speed	rpm	600			500			400	
Max. rotational speed P_1		3000			2750			2500	
Motor outlet pressure P_{out}	bar								
Leakage-oil line pressure P_{drain}	psi								

Displacements 21 and 75 are special release, please get in touch with sales dept.

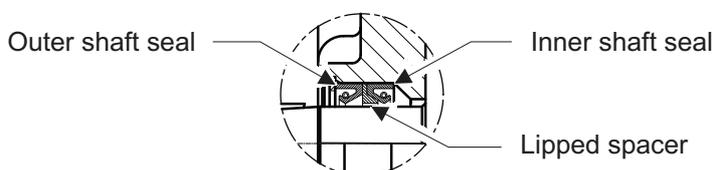

TECHNICAL DATA

- Minimum operating fluid viscosity 12 mm² / sec
- Permitted viscosity range 12 - 800 mm² / sec
- Recommended viscosity range 20 - 80 mm² / sec
- Permitted viscosity for starting 2000 mm² / sec
- Fluid operating temperature range -15 to 85 °C
- Fluid temperature range with FPM seals -20 to 110° C
- The standard fluids are all the mineral oil-based corresponding to DIN/ISO, for other fluids, please get in touch with our technical dept.

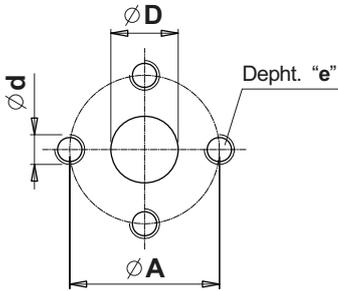

*) During the application of control systems or devices with critical counter-reaction, such as steering and brake valves, the type of filtration selected must be adapted to the sensitivity of these devices/systems.
 Safety requirements pertaining to the whole systems are to be observed.
 In the case of applications with frequent load cycles please consult us.

MOTOR ASSEMBLING FEATURES

All our standard motors have a double shaft seal, the one which faces the inner of the motor is reinforced by a lipped washer.

IN CASE OF USE AS A UNIDIRECTIONAL MOTOR:

- ANTI-CLOCKWISE PUMP BECOMES A CLOCKWISE MOTOR
 - CLOCKWISE PUMP BECOMES AN ANTICLOCKWISE MOTOR
- THE POSITION OF THE PORTS IS THE SAME BUT THE INLET BECOMES OUTLET AND VICEVERSA

A	B
G1"	G 3/4
1"-5/16-12 UN(SAE 16)	1"-1/16-12 UN(SAE 12)

code 1

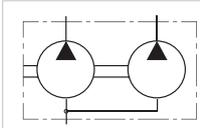

For pumps with threaded rear ports, suitable up to 80 l/min delivery.

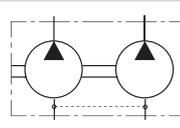

A	C
G 3/4	G 3/8
1"-1/16-12 UN(SAE 12)	9/16-18UNF-2B (SAE 6)

GEAR PUMPS "E" SERIES

3PE

MULTIPLE GEAR PUMPS
with common inlet port*

MULTIPLE GEAR PUMPS
with inlet port on each body

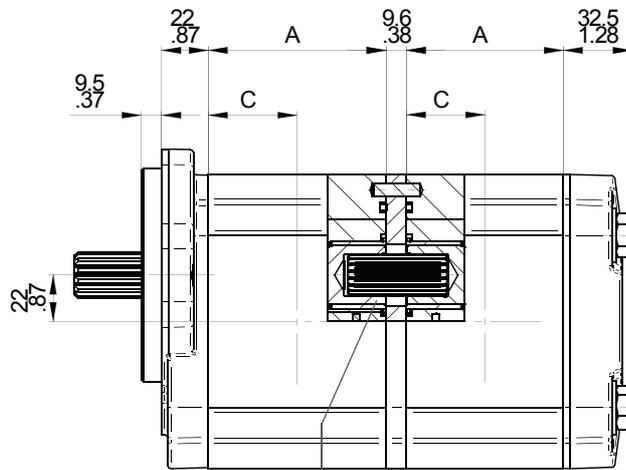

Showed release with flange S3 and shaft 55

In case of common inlet port, to avoid too high value of oil speed, 40l/min is the max. sucked flow for the downstream pump.

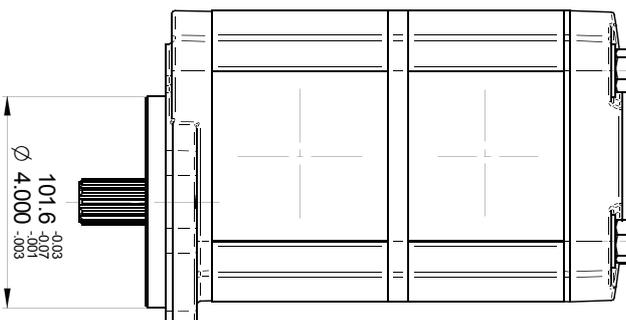

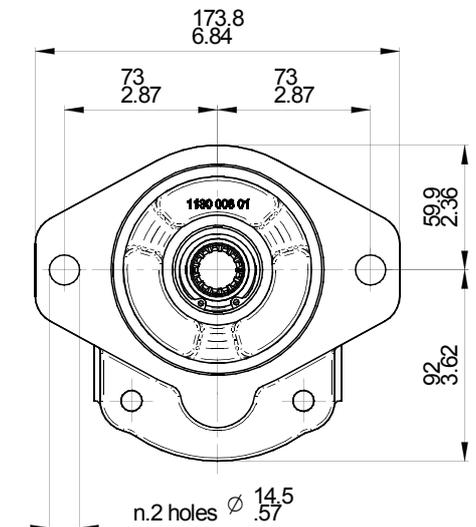

Performance carried out with oil viscosity at 16 cSt and oil temperature at 60°C.

*For working conditions, using exclusively pressure P1, the value of max. speed must be reduced of 10%.

Max. torque 280 Nm
(2480 lbf in)

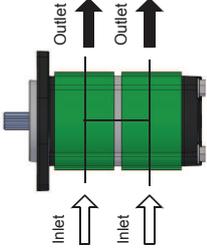

- PORT TYPES AND SIZES ON PAGE A9 - A10
- COMMON SUCTION PORT SIZE ON PAGE A15
TO OBTAIN COMPLETE WEIGHT OF MULTIPLE PUMP YOU HAVE TO ADD THE SINGLE STAGE WEIGHT, YOU HAVE IN THE TABLE ABOVE, PLUS:
- WEIGHT OF THE FLANGE = 2.4 kg (5.3 lbs)
- WEIGHT OF THE MIDDLE PLATE = 0.9 kg (2 lbs) THE MIDDLE PLATES CAN BE MORE THAN ONE.
- WEIGHT OF THE REAR COVER = 2.4 kg (5.3 lbs)

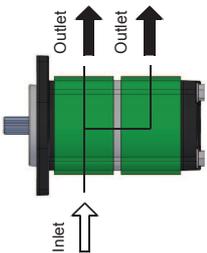

FOR REASON OF READABILITY, IN CASE OF INTENSIVE USE, WE CAN PROVIDE THE FOLLOWING TABLE AS A STANDALONE FILE.

In case of common suction configuration, we have to take care of the area of the common suction port to avoid cavitation. The suggested speed of the oil at suction line is 1.5 m/sec, using this table and according of which is the total flow which goes into the pump, you can obtain the value of the proper diameter (mm) and proper area (cm²).

In case of common suction configuration, we have to take care of the area of the common suction port to avoid cavitation. The suggested speed of the oil at suction line is 1.5 m/sec, using this table and according of which is the total flow which goes into the pump, you can obtain the value of the proper diameter (mm) and proper area (cm²).

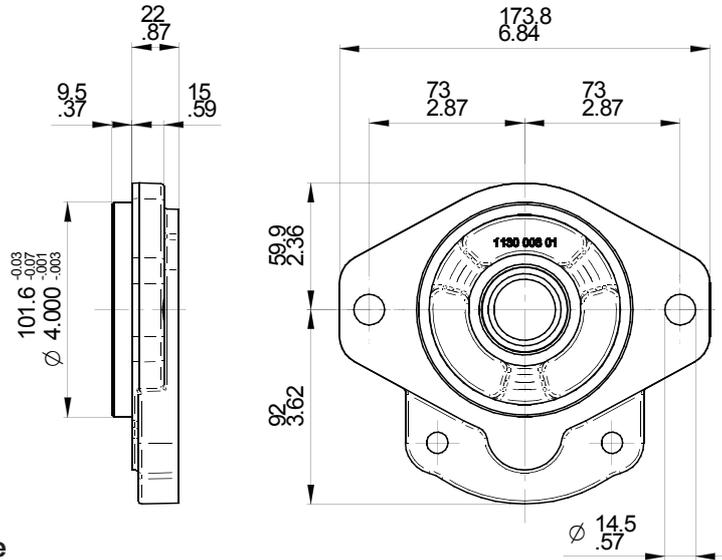

When needed, special bodies with an enlarged inlet port are available.

European standard mounting flange

In case of radial and/or axial load on the shaft, we suggest the use of this support.

The diagram below, shows the maximum radial load referring to a bearing life of 3000 hours.

Consider a maximum allowed axial load (F_a) in terms of 15% of the max. radial load (F_r).

To calculate the absorbed pump-torque or motor efficiency, please use the following formula:

$$C(Nm) = \frac{C_y \Delta p}{62.8}$$

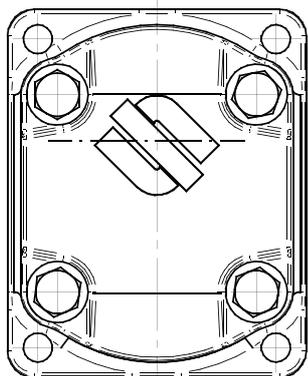

C_y = Displacement pump

Δp = Pressure (bar/psi)

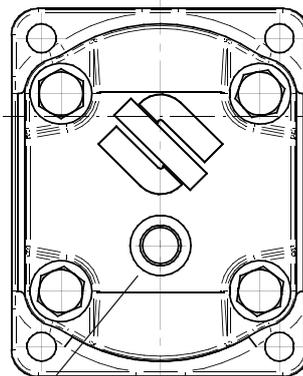

REAR COVERS

Cast iron standard cover for unidirectional pumps and motors.

Cast iron standard cover for reversible pumps and motors.

AVAILABLE CONFIGURATIONS WITH PRIORITY FLOW VALVE

code VP1

Priority flow valve, excess flow to second actuator.

CF = Priority flow port
EF = Excess flow port

code VPS1

Priority flow valve, excess flow to second actuator with pressure relief valve on priority flow line.

CF = Priority flow port
EF = Excess flow port

code VPD1

Load sensing priority valve with dynamic signal without main relief valve

CF = Priority flow port
EF = Excess flow port
LS = Load sensing signal port

code VPDS1

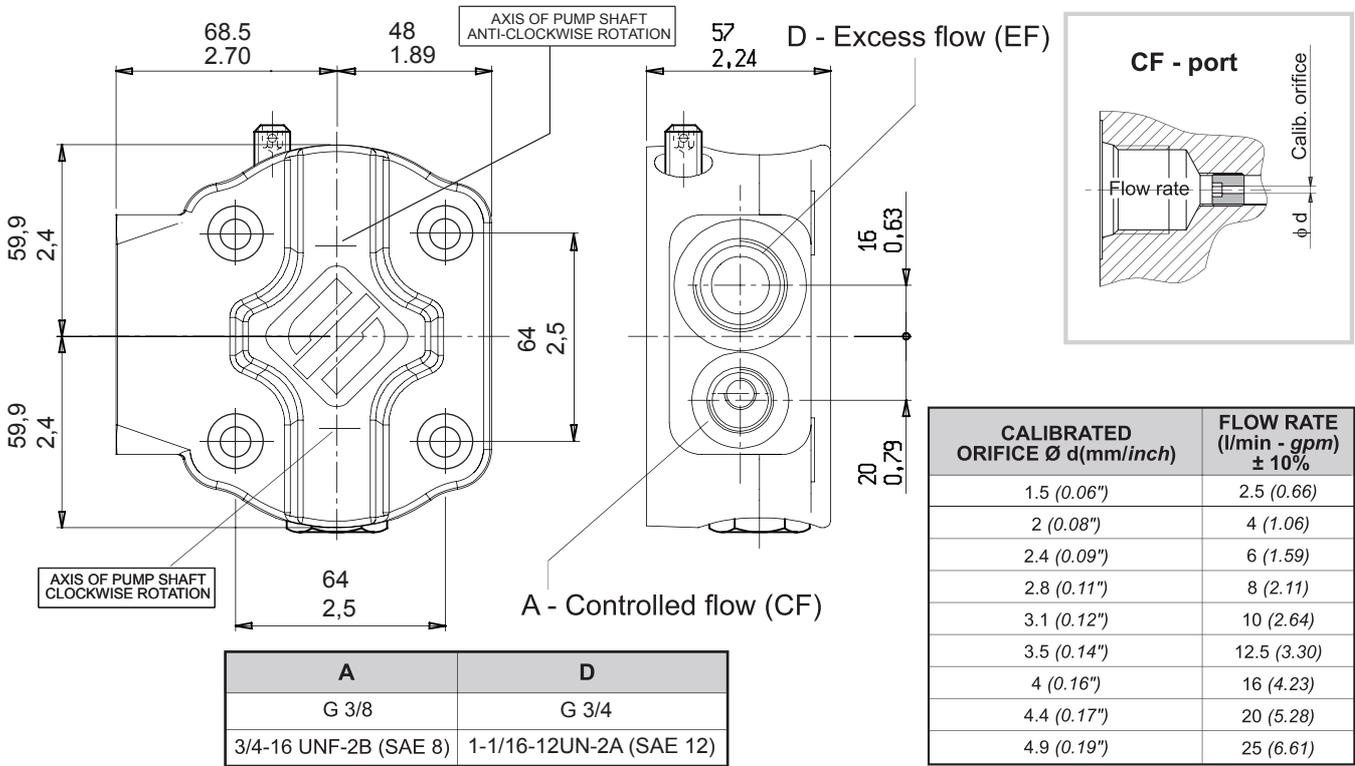

Load sensing priority valve with dynamic signal with main relief valve

CF = Priority flow port
EF = Excess flow port
LS = Load sensing signal port

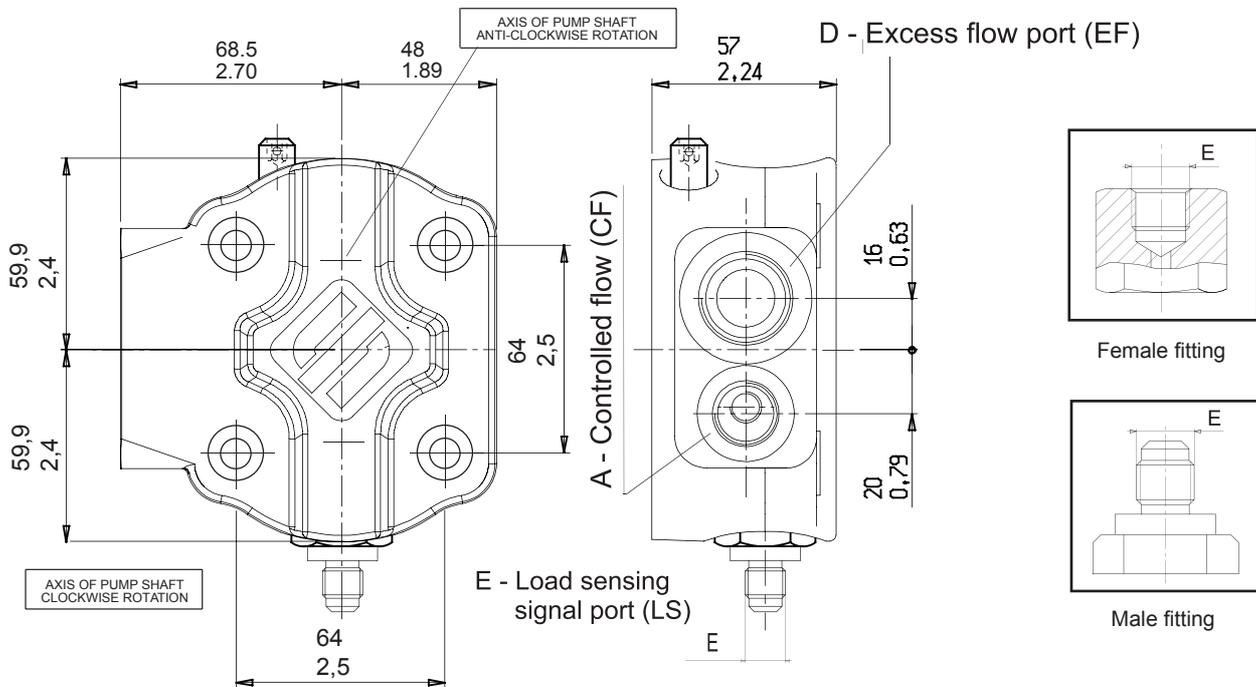

The double or triple pumps can be configured with priority flow valve too.
The stage which has its flow divided into priority and exceeded flows is always the back one.

VP1 - VPS1 (FEATURES)

VPD1 - VPDS1 (FEATURES)

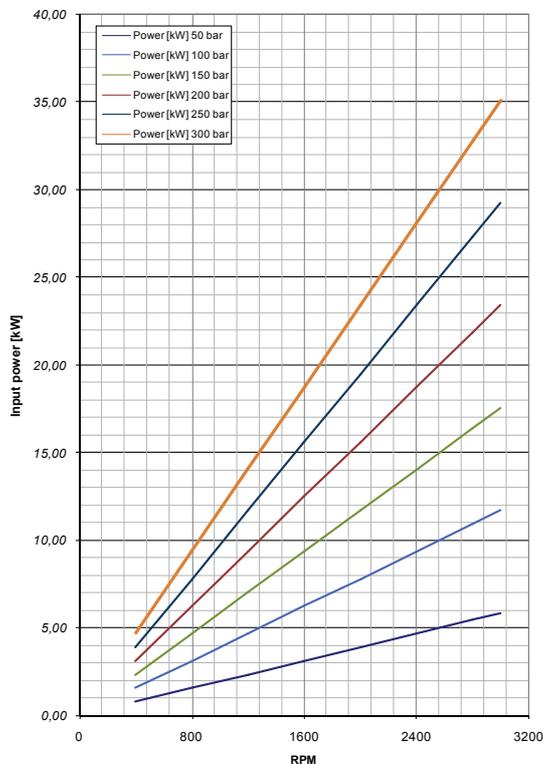

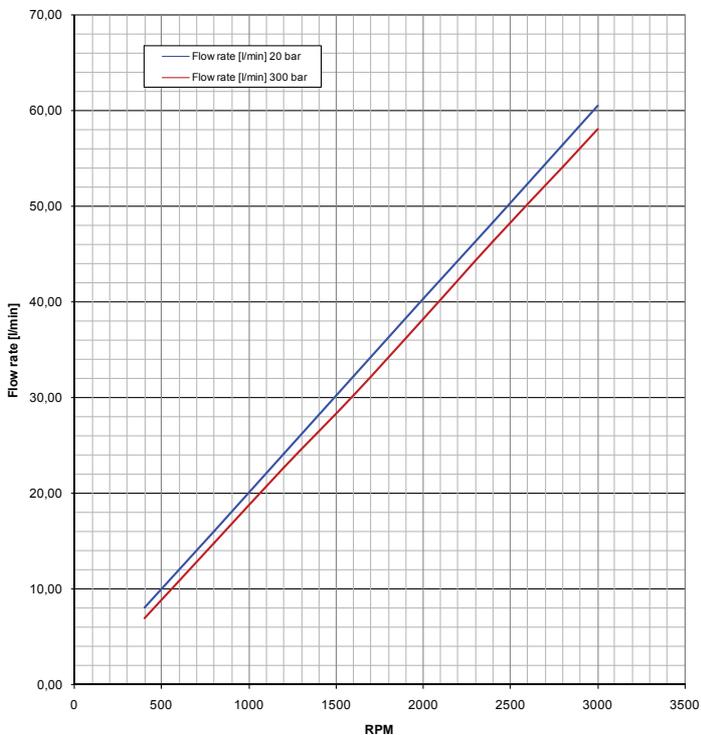

Minimum load sensing signal (LS) = 4 bar (28 psi)
